Main Ideas/
Questions

Notes

Converse of Triangle Proportionality Theorem

If a line intersects two sides of a triangle and separates the sides into _____ corresponding segments, then the line is _____ to the third side of the triangle.

If $\frac{AB}{BC} = \frac{AE}{ED}$, then $\overline{BE} \parallel \overline{CD}$

Examples

$DH = 18$, $HE = 36$, $DG = 9$, and $DF = 27$. Determine if $\overline{GH} \parallel \overline{FE}$.

$XY = 15$, $YZ = 25$, $WA = 18$, and $AZ = 32$. Determine if $\overline{WX} \parallel \overline{AY}$.

Parallel Line
Application

Two-Transversal Proportionality

If _____ or more parallel lines intersect _____ transversals, then they divide the transversals _____

If $\overleftrightarrow{AD} \parallel \overleftrightarrow{BE} \parallel \overleftrightarrow{CF}$, then $\frac{AB}{BC} = \frac{DE}{EF}$

Example:

Solve for the missing length.
